	면담시간/장소: 매주 수업시간 직전 30분								
1. 수업목표	This seminar deals with the analytical methodologies that examine architectural and urban spaces in a systematic and quantitative manner. The spatial analysis is a means to explore and extract cultural and social implications imbedded in the space. It has to be objectively done. In other words, it should be free from any socio-cultural biases that might have been based on a specific culture or society.								
2. 교재 및 참고문헌	The seminar consists of reading the texts (specified below) and presentations of the existing research re-sults. Each student is responsible to summarize a part of the reading materials. He or she is to present the summary in each class. At the end of the semester, each student is required to design and actually conduct his or her own research project using these two models. The research theme is open but it has to be
